

# BODY SLIMMING TREATMENTS

## with **TOSKANI Meso**

### HOW DOES IT WORK?

The effects of **TOSKANI Meso** are driven by lipolysis, a process that results in the cleavage of one molecule of triglycerol (the substance that makes up an adipocyte, or fat cell) into three molecules of fatty acid and one molecule of glycerol. This splitting occurs with the help of injections, which, upon entering the fatty tissue, causes the release of fat from the adipocytes.

One of the main causes of obesity is the excess of lipid synthesis over the processes of their digestion. In this case, the excess fat remains in the body and accumulates in the subcutaneous fat between muscle fibers and on vessel walls. **TOSKANI Meso** combats these deposits.

### BENEFITS OF APPLICATION

- ✓ There is no need for anesthesia
- ✓ The procedure for administering **TOSKANI Meso** is very simple and effective, convenient and, above all, painless
- ✓ **TOSKANI Meso** dissolves and destroys fat cells (fat cells are eliminated through sweat and urine)
- ✓ **TOSKANI Meso** is effective against cellulite and, due to the peptide content, makes the skin supple and elastic
- ✓ **TOSKANI Meso** quickly removes fat deposits in parts of the body that cannot be reduced with physical exercise or diet
- ✓ **TOSKANI Meso** guarantees a safe treatment, due to the highest purity of raw materials; Maximizes the effectiveness of lipolysis

### USING **TOSKANI Meso**, YOU CAN CORRECT THE FOLLOWING AREAS
